Who we are

Founded in November 2017, Hydrogen Craft Corporation is dedicated in developing hydrogen fuel cells and promoting its application. We make light weight and high performance CCM, MEA, BBP and fuel cell stacks. Our fuel cells are mainly used on aircraft, power generator, e-bike, vehicle, and boats.

Hydrogen power system has 3-5 times higher energy density than Lithium battery. Therefore, hydrogen drone can fly much longer than battery ones. HydroCopter is the first hydrogen drone certified by China Electric Power Research Institute. It significantly improves the efficiency of inspection work on power grids, oil & gas pipelines, solar & wind farms, and forests. In the future, hydrogen will also power electric aircraft to reduce the cost and emissions of aviation industry.

Hydrogen is the best mate of renewable energy. It can store energy in low cost and long periods. We develop applications for every household to produce hydrogen and store it. The hydrogen produced can generate electricity in power outage, or power e-bikes, lawn mowers and cars. People will not only produce renewable power at home, but also produce renewable fuel, hydrogen. Renewable energy and hydrogen will enable more and more homes to be energy independent. We believe, in the renewable energy era, an energy independent country is formed by a high proportion of energy independent homes.

Hydrogen industry is still in the early stages of its life. There are still more to be explored and invented. Hydrogen Craft encourages creativity and collaboration in our team. We partnered with global e-bike manufacturers to develop the fuel cell power system for e-bikes. We work with COMAC to develop fuel cell power for eVTOL. We believe VALUE GUIDED INOVATION is the key to explore ways for hydrogen industry.

We are willing to work with global partners to power a better world with hydrogen technology..

What We Do

Hydrogen Fuel Cell System (H₂ Power Supplier)

Drone Application

- Design and manufacture hydrogen drones
- Provide hydrogen fuel cell system to drone companies

E-bike Application

- Provide E-bike fuel cell system

Small Vehicles Application

- Provide fuel cell system to mini cargo vans and other small vehicle
- Co-manufacture and Co-sell e-Bike with bike companies.

Energy Storage Application

- Design and manufacture portable hydrogen power generators
- Develop household hydrogen production and storage system.

Boat Application

- Provide boat fuel cell systems to boat manufacturers.
- Co-design, co-manufacture and co-sell hydrogen powered boats.

POWER A BETTER WORLD WITH HYDROGEN
